Professional Summary

Frontend-focused Full-Stack Engineer with 12+ years building modern web apps in TypeScript, specialising in Vue/Nuxt and React/Next.js. Currently shipping product frontends at Mercedes-Benz alongside the Python services behind them. Focused on type-safe, maintainable code, with an eye for detail in component design, accessibility, and performance.

Core technologies: TypeScript, Vue, Nuxt, React, Next.js, Tailwind, NestJS, Python, LLMs, Kubernetes

Technical Skills

Frontend: *React, Next.js, Vue, Nuxt, Remix, TypeScript, JavaScript, Tailwind, TanStack, React Server Components*

AI & LLM: *LLMs, AI Agents, Agent-to-Agent (A2A), Model Context Protocol (MCP), Open Knowledge Format (OKF), RAG, LangChain, OpenAI API, Prompt Engineering*

Backend & API: *Python, Async Python (async/await), FastAPI, Node.js, NestJS, REST APIs, zod*

Data: *PostgreSQL, MongoDB, Prisma, Drizzle*

Infrastructure & CI/CD: *Docker, Kubernetes, Git, GitLab CI, Azure DevOps, pnpm Monorepos*

Practices: *AI-Assisted Development (Claude Code, GitHub Copilot), Unit Testing (pytest, Vitest, Jest), Mocking, Dependency Injection, Linting (Ruff), Static Type Checking (ty), Code Review, Agile, Scrum*

Professional Experience

Senior Full Stack Engineer

MBition GmbH (Mercedes-Benz), Berlin | Oct 2023 - Present

Tech: TypeScript, Vue, Nuxt, NestJS, Python, FastAPI, LLMs, Agent-to-Agent (A2A), Model Context Protocol (MCP), Kubernetes, GitLab CI, PostgreSQL, MongoDB, Azure DevOps

- Ship product features end-to-end in Vue and Nuxt with strict TypeScript — component architecture, composables, and zod-validated REST contracts shared across the stack.
- Built a Role-Based Access Control (RBAC) system with CASL.js, enforcing one permission definition across both the Nuxt UI and the NestJS API.
- Consolidated multiple products into a pnpm monorepo, cutting build times by ~50% and enabling end-to-end type-safety and better DX.

- Build and operate a Python platform that hosts multiple LLM agents on Kubernetes — providing the shared FastAPI web service, base classes, and CI/CD that individual agent teams plug their business logic into, built on LangChain, OpenAI APIs, and retrieval-augmented generation (RAG).
- Drove AI-assisted development across the team: authored the AGENTS.md instruction set and reusable agent skills, and set up a team wiki in the Open Knowledge Format (OKF) to make organizational knowledge agent-consumable.
- Re-architected the platform from synchronous to fully asynchronous Python (async/await), removing the need for multiple worker processes and cutting memory consumption by 75% (4 GB to 1 GB); right-sized Kubernetes requests, limits, and autoscaling to realize the saving across the cluster.
- Decoupled the codebase with dependency injection so components can be mocked and unit-tested in isolation, then enforced quality gates in CI — Ruff linting, ty static type checking, and a pytest suite — surfacing and fixing ~5,000 pre-existing type errors.
- Migrated the project from GitHub to GitLab and parallelized the CI/CD pipelines, halving runtime; each merge request now spins up its own Kubernetes pod, giving 140 contributors a production-like environment to validate changes in.

Frontend Engineer

DERICON GmbH, Berlin & Frankfurt | Dec 2016 - Oct 2023

Tech: React, Remix, Vue, Nuxt, Angular, TypeScript

- Launched a graph-based no-code workflow builder (React/Remix) that let non-technical users model and deploy workflows independently.
- Delivered new features on an Angular-based frontend, modernizing components and improving performance and accessibility.
- Built middleware and UI integrations to bridge legacy systems with modern REST APIs, simplifying data flows and de-risking migrations.

Full Stack Developer

SLH GmbH, Schüttorf | Oct 2011 - Nov 2014

Tech: JavaScript, ExtJS, REST, PHP, Symfony, MySQL

- Modernized a legacy frameset-based PHP application into a modular front-end/back-end architecture, rebuilding the UI with ExtJS on a clean PHP backend.

Education

M.Sc. Applied Computer Science

HTW Berlin | Oct 2019 - Oct 2023

Specialisations: AI, Deep Learning, Data Science, Bioinformatics | Grade: 1.1 | Exchange: NTUST, Taipei

B.Sc. Applied Computer Science

HTW Berlin | Apr 2016 - Sep 2019

Thesis: Style transfer for photos using deep learning | Grade: 1.6 | Exchange: UNINTER, Cuernavaca, Mexico

IT Management Assistant (Apprenticeship)

Kortmann Beton GmbH & Co. KG | Jul 2009 - Jul 2011
